

Cutters Edge Introduces the Best Priced, Fastest Cutting Diamond Blade on the Market...

Black Lightning

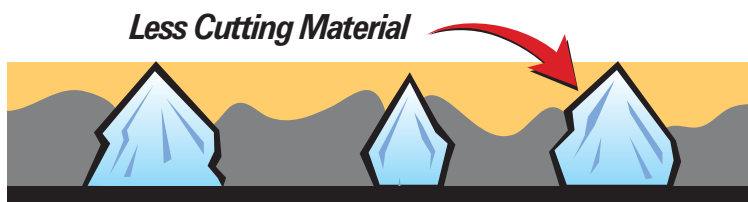

High Speed Diamond Cutting Blade that Cuts Anything, Anywhere Safer and Faster than Any Other Diamond Blade

Black Lightning Blade Features:

A New, In-Line Cooling Port Design with More Cooling Ports -
Enables faster and cooler high speed diamond cutting performance in all materials.

Excusive Bi-Directional Cutting Capability - The Black Lightning Blade cuts safely - in either rotational direction for long blade life and maximum performance. Unlike other blades that have angled gullets, limiting them to safely cutting in one rotational direction and reducing their blade life, the perpendicular gullets on the Black Lightning Diamond Blade allow cutting in both rotational directions; enhancing safety, cutting speed and blade life.

Black Lightning Difference:

30% More Exposed Diamond Cutting Material

Vacuum Brazing uses a thinner, stronger layer of bonding alloy to permanently fuse the cutting diamonds to the substrate. This process leaves up to **30% MORE** diamond cutting face and edges exposed for faster, better and cooler cutting plus longer cutting life than electroplating.

Electroplating requires a much thicker layer of bonding material to attach the diamonds to the substrate. The thicker layer can cover up to 75% of the cutting diamond and result in more heat buildup and shorter diamond cutting life.

Black Lightning

High Speed Diamond Cutting Blade

Blade Available in Three Sizes:

Size	Part No.
12-inch	CEDVBL12
14-inch	CEDVBL14
16-inch	CEDVBL16

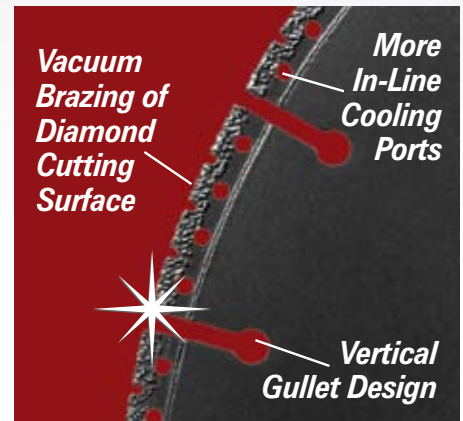

Fits Arbor Sizes: 20mm, 22mm and 1-inch

**The New Black Lightning
Diamond Blade Not Only
Fits All Saws... It Fits All
Angle Grinders, Too.**

4 1/2-inch for
All Angle Grinders

**Cuts Anything, Anywhere
Safer and Faster than Any
Other Diamond Blade**

**Contact Us to See the
Black Lightning High Speed
Cutting Blade in Action.**
